

GML-Underground

An industry-disrupting
monitoring solution
for underground.

Developed specifically for geotechnical convergence monitoring, the GML is both high resolution and highly precise, capable of detecting rock and ground support movement with sub-millimetre accuracy.

GML-Underground

Unrivalled
sub-millimetre accuracy
for early detection

Real-time data
streaming with
multi-user functionality

Live, continuous or
periodic monitoring
of any work area

Download the 'Weavar' app from
the App Store or Google Play and
scan this page for a demonstration.
